

ICMR-2026 Research Paper Review and Publication Process

1. Research Paper Submission

Authors submit their research papers to the 17th International Conference on Management Research (ICMR-2026) in accordance with the prescribed submission guidelines and deadlines. Each submission is considered in relation to the conference theme and relevant research track before entering the academic review process.

2. Scientific Committee Review

The submitted research papers undergo a single-blind review by the ICMR-2026 Scientific Committee. The review assesses the relevance, originality, academic quality, methodological rigor, clarity, and potential contribution of each paper. Papers that meet the required academic standards are accepted for presentation at the conference.

3. Conference Presentation

Accepted papers are presented at ICMR-2026 during the designated conference sessions. Authors have the opportunity to communicate their research findings and engage with academics, researchers, and other conference participants through scholarly discussion and exchange.

4. Best Paper Recognition

Outstanding papers presented at the conference may be considered for Best Paper Awards in accordance with the evaluation criteria established by ICMR-2026. This recognition acknowledges research demonstrating notable academic merit, originality, and contribution within the respective research area.

5. Selection for Knowledge Partner Journal Consideration

Selected high-quality full-length papers may be identified for consideration by the relevant Knowledge Partner journals. The selection takes into account the quality and contribution of the research, as well as its relevance to the scope and requirements of the respective journal. Selection for journal consideration does not constitute acceptance or guarantee publication.

6. Author Revision and Journal Submission

Authors whose papers are selected for journal consideration are required to further develop and revise their manuscripts in accordance with the author guidelines and submission requirements of the relevant Knowledge Partner journal. These requirements may include provisions relating to manuscript structure, formatting, referencing, ethical standards, word limits, and other journal-specific criteria. Authors then submit the revised manuscripts directly to the respective journals for formal consideration.

7. Independent Journal Review and Editorial Decision

Each submitted manuscript undergoes the independent peer-review and editorial assessment process of the respective journal. The manuscript is evaluated according to the journal's scope, editorial policies, peer-review procedures, and publication standards. Authors are responsible for addressing reviewer comments and completing any revisions requested by the journal. The final decision regarding acceptance, revision, or rejection rests solely with the respective journal.

8. Publication

Manuscripts that successfully satisfy the journal's peer-review and editorial requirements may proceed to publication in the respective Knowledge Partner journal. Once a manuscript receives final acceptance from the journal, it will be considered for inclusion in an upcoming issue of the respective journal, subject to the journal's publication schedule and editorial requirements. Participation in ICMR-2026, conference acceptance, presentation, Best Paper recognition, or selection for journal consideration does not guarantee publication.
